Asunto: Respuesta a la petición de ficha de datos de seguridad de productos 3M

Estimado cliente,

Esta carta es en respuesta a su petición de información sobre la disponibilidad de ficha de datos de seguridad para los productos 3M indicados en el Anexo incluido al final de la presente carta.

Debido al gran número de peticiones de información que recibimos, 3M proporciona cartas como esta en respuesta.

Todos los productos sobre los que usted solicitó información y que son listados en el anexo son considerados o bien “artículos” o bien “productos sanitarios”. Cada una de estas categorías de producto posee su propio razonamiento legal bajo el cual no existe necesidad de facilitar fichas de datos de seguridad, ambas de acuerdo con el Reglamento (CE) nº 1907/2006, de Registro, Evaluación, Autorización y Restricción de Sustancias Químicas (REACH). A continuación, se exponen los diferentes motivos que rigen esta determinación:

Según el artículo 3 del citado Reglamento un “artículo” se define como:

«Artículo» es un objeto que, durante su fabricación, recibe una forma, superficie o diseño especiales que determinan su función en mayor medida que su composición química.

Tal y como se establece en los artículos 31 y 33 del Reglamento, no hay obligación legal de generar hojas de datos de seguridad para este tipo de productos “artículos”, pues no es una preparación química y utilizado en las condiciones esperadas de uso y de acuerdo con las instrucciones suministradas por el fabricante no presenta ningún riesgo para la salud ni libera intencionalmente ninguna sustancia.

Por su parte, “**producto sanitario**” se define en las Directivas 90/385/CEE, 93/42/CEE y 98/79/CE del Consejo, sus posteriores modificaciones y transposiciones nacionales correspondientes, tal y como se indica a continuación:

“Cualquier instrumento, dispositivo, equipo, material u otro artículo, incluidos los programas informáticos necesarios para su buen funcionamiento, destinado por el fabricante a ser utilizado en seres humanos, solo o en asociación con otros, con fines de: Diagnóstico, prevención, control, tratamiento o alivio de una enfermedad; diagnóstico, control, tratamiento, alivio o compensación de una lesión o de una deficiencia; investigación, sustitución o modificación de la anatomía o de un proceso fisiológico; regulación de la concepción, y que no ejerza la acción principal que se desee obtener en el interior o en la superficie del cuerpo humano por medios farmacológicos, inmunológicos ni metabólicos, pero a cuya función puedan contribuir tales medios.”

El artículo 31 del Reglamento (CE) n° 1907/2006, de Registro, Evaluación, Autorización y Restricción de Sustancias Químicas (REACH), por el que se regula la obligación y el formato de las fichas de datos de seguridad, establece que será obligatoria la puesta a disposición de fichas de datos de seguridad, siempre que una sustancia o mezcla reúna los criterios para ser clasificada como peligrosa y demás requisitos de conformidad con el Reglamento (CE) n° 1272/2008, relativo a la Clasificación, Envasado y Etiquetado de preparados peligrosos (CLP).

El artículo 1.5 del Reglamento (CE) n° 1272/2008, relativo a la Clasificación, Envasado y Etiquetado de preparados peligrosos (CLP), establece las excepciones a su aplicación:

“El presente Reglamento no se aplicará a las sustancias y mezclas en las siguientes formas, en la fase de producto terminado, destinadas al usuario final:

- a) los medicamentos, tal como se definen en la Directiva 2001/83/CE;*
- b) los medicamentos veterinarios, tal como se definen en la Directiva 2001/82/CE;*
- c) los productos cosméticos, tal como se definen en la Directiva 76/768/CEE;*
- d) los **productos sanitarios**, tal como se definen en las Directivas 90/385/CEE y 93/42/CEE del Consejo, **que sean invasivos o se apliquen en contacto directo con el cuerpo humano**, y en la Directiva 98/79/CE;*
- e) los alimentos o piensos, tal como se definen en el Reglamento (CE) no 178/2002...”*

Por tanto, y debido a todo lo anterior, queda claro que los productos sanitarios que sean invasivos o se usen en contacto directo con el cuerpo humano, en la fase de producto terminado y listos para su venta al usuario, están exentos de disponer de ficha de datos de seguridad.

Adicionalmente, les informamos que los productos sanitarios, se regulan bajo su propia normativa específica, más estricta y que exige mayores restricciones en el empleo de materias, detalle de etiquetado y evaluaciones exhaustivas que avalen la seguridad de los productos, entre otros requerimientos.

En cualquier caso, si usted necesita información adicional sobre la presencia o ausencia de sustancias específicas en cualquier producto 3M o cualquier otra aclaración, podemos facilitársela a su petición.

Confiamos en que esta información sea de utilidad. No dude en contactar nuevamente con nosotros para cualquier consulta adicional.

Atentamente,

Ascensión González Carrasco

La información aportada en esta carta referida al contenido del material representa el conocimiento y creencia de 3M España hasta el momento, y puede basarse, totalmente o en parte, en información proporcionada por los proveedores.

En caso de que quedara acreditado por sentencia judicial firme que el producto no se ajusta al tenor literal de la presente certificación 3M procederá, a su elección, al reemplazo del producto, a la reparación del mismo sin coste alguno para el comprador o al reembolso del importe abonado para su adquisición. Más allá de estas medidas, salvo en los casos en los que la normativa en vigor establezca lo contrario, 3M no asume ninguna responsabilidad por daños o pérdidas que de forma directa o indirecta se hubieran producido con ocasión de la utilización de sus productos. Cualquier reserva relacionada con la garantía del producto incluida en el pedido de compra no tendrá validez si no ha sido confirmada por escrito por personal debidamente autorizado de 3M.
